

LungAI - Templates Folder Guide

The **templates/** folder contains all HTML pages rendered by the Flask application.

Recommended Structure

```
templates/  
  home.html  
  login.html  
  register.html  
  predict.html  
  charts.html  
  base.html (optional common layout)
```

Purpose of Each File

home.html: Landing page with project introduction and navigation.

login.html: User login form.

register.html: User registration form.

predict.html: Accepts patient inputs and displays prediction results.

charts.html: Displays prediction charts and visualizations.

base.html: Reusable layout with navbar/footer using Jinja2 template inheritance.

Best Practices

- Keep HTML pages responsive using Bootstrap.
- Use Jinja2 template inheritance.
- Store only HTML templates in this folder.
- Keep CSS, JS and images inside static/.
